AI SYSTEMS PROFILE

Software Engineer focused on AI-enabled backend systems, event-driven architecture and production automation. Experience building LLM/RAG workflows, asynchronous processing pipelines and enterprise integrations with Python, Ruby on Rails, TypeScript, PostgreSQL, Redis, Sidekiq, REST APIs and webhooks. Own systems from design through deployment, monitoring and incident resolution.

TECHNICAL SKILLS

- AI Systems: LLMs, RAG, Embeddings, pgvector, Pinecone, Whisper, OpenAI, Anthropic
- Backend: Python, Ruby on Rails, Django/DRF, TypeScript, Next.js, React, REST APIs, Webhooks
- Async & Data: Sidekiq, Redis, PostgreSQL, SQL, Data Pipelines, Web Scraping, Idempotency, Retries
- DevOps: Docker, Linux, Nginx, Git/GitHub, Vercel, CI/CD, SSL/TLS
- Integrations: Chatwoot, Zoho CRM/Deluge, Aircall, WhatsApp Cloud API

EDUCATION

Instituto Tecnologico Superior de Atlixco
Puebla, Mexico
M.S. in Artificial Intelligence
2026 - Present

Instituto Tecnologico Superior de Atlixco
Puebla, Mexico
Instituto Tecnologico Superior de Atlixco - B.S.
Computer Systems Engineering
2021 - 2026

LANGUAGES

- Spanish: Native
- English: B2

EXPERIENCE

Software Engineer / Automation Engineer
Capital Plus Bienes Raices
Aug 2025 to Present

- Architect and maintain production systems around a customized Chatwoot fork, integrating Zoho CRM, Aircall, WhatsApp and internal services through REST APIs, webhooks and event-driven workflows.
- Built an AI Call Intelligence pipeline: Aircall events → background jobs → recording/transcription → Whisper fallback → deterministic metrics → LLM structured analysis → scorecards → Zoho synchronization.
- Designed resilient async processing with Sidekiq/Redis, retries, scheduled recovery jobs and idempotent processing for delayed provider data and failure recovery.
- Developed AI analysis for sales role, conversation type, qualification signals, objections, risks and intent, with dashboards and call-level drilldowns.
- Built 25+ backend automations for lead routing, follow-up, inventory synchronization, reporting and operational control using Python, Zoho Deluge and APIs.
- Built RAG-based internal knowledge workflows using document ingestion, embeddings and vector search to support business information retrieval.

SELECTED ENGINEERING PROJECTS

Agente-Capital — Internal AI & Sales Operations Platform

- Built an internal Capital Plus platform combining a WhatsApp lead-qualification bot and operations dashboard using Next.js 14, TypeScript and PostgreSQL.
- Implemented FSM-based conversation orchestration, LLM intent/response selection, RAG document queries deployed on Vercel.

SIT — Academic Monitoring & Tutoring Platform

- Built a Django/DRF/PostgreSQL academic platform with role-based users, tutor/group assignments, subjects, grades, class attendance and tutoring sessions.
- Implemented relational constraints, validation rules and Excel-based academic/attendance reporting workflows.

Ebenezer — Clinical Laboratory Management System

- Built a Django/React/PostgreSQL system for medical appointment scheduling, patient appointment management, laboratory services and branch administration.
- Developed administrative workflows and a management panel for day-to-day laboratory operations.

AI Report Generator — Automated Analytics Platform

- Built Python-based data pipelines for KPI generation, validation and executive reporting workflows.
- Applied LLM-assisted analysis to summarize information, identify patterns and generate narrative insights for reports and dashboards.
